Social Determinants of Health (SDOH)

Roadmap 2.0 Charge

Identify and invest in IT infrastructure needs that improve social determinants of health service delivery

Committee Feedback

- Evaluating IT Infrastructure Options
 - Current: 3%
 - Single Platform: 15%
 - Community Information Exchange: 82%

- Additional Feedback Gathered:
 - Committee members talked to an additional 136 people
 - Feedback was mixed
 - Many wanted more information to understand the options better
 - Lots of support for a CIE
 - Some support for a Single Platform

What is a Community Information Exchange?

“An ecosystem comprised of multidisciplinary network partners that use a shared language, a resource database, and an integrated technology platform to deliver enhanced community care planning.” ([2-1-1 San Diego](#))

“A ‘Community Information Exchange’ should encompass the three elements of primary infrastructure that comprise a holistic ecosystem of health and social care: **Resource Data Exchange, Client Data Exchange, and Community Data Governance**” ([Sorenson & Bloom, 2021](#)).

A Health Information Exchange, but for non-clinical data about clients shared among social service providers.

Committee Charter

- Vision: A Utah in which all residents can readily access and benefit from resources they need to live with health, dignity, and respect.
- Mission: Cultivate a healthy information ecosystem that provides holistic support to people in the process of navigating among various systems of care to meet various needs and enable our community to understand, evaluate, and work to improve the functioning of these systems over time.

Committee Charter

Values

- Accessibility
- Accountability
- Equitability
- Responsibility

Principles

- Learn by doing
- Center impacted stakeholders in decision-making
- Build and maintain trust
- Serve common interests
- Anticipate, mitigate, reduce, and redress any possible harms

Action Items

Deliverable	Delivery Date
Participate in the Citizens Portal Key Stakeholder Group	December 2021
Create a charter endorsed by key stakeholders	January 2022
Define and select CIE use cases	January 2022
Publish survey results from key stakeholders around barriers, priorities, and risks related to the CIE infrastructure	January 2022
Develop a research agenda to understand any further barriers, priorities, and risks among stakeholders related to the CIE infrastructure/use cases	February 2022
Release CIE development process governance model and Request for Information	May 2022
Release proposal for a CIE pilot project involving key stakeholders that will enable interoperability across multiple IT products	June 2022
